

Mithaq Typography Specimen

Ticket P2.03 / Phase 2 Creative Concept Development / Status: PASS WITH CONDITIONS

Families tested: Cormorant Garamond, DM Sans, JetBrains Mono, Tajawal, Lemonada

PDF note: exact WOFF2-rendered visual specimen source is mithaq-typography-specimen.html with local font files. This PDF is generated by the available local PDF engine and carries the decision/specimen content and measured payloads.

Executive Summary

Proceed with the planned typography system with conditions. Cormorant Garamond is approved for large English authority moments. DM Sans is approved for English body and UI clarity. JetBrains Mono is approved only for precise labels and metadata. Tajawal is approved as Arabic body/UI and the safe Arabic display default. Lemonada should be limited to accent display moments until client and Arabic copywriter review confirm it feels mature enough.

Typeface Overview

Typeface	Role	Weights Tested	Decision
Cormorant Garamond	English display	400 Italic / 600 / 700	Keep for display only; avoid body use.
DM Sans	English body/UI	300 / 400 / 500 / 600	Keep 400/500/600; 300 optional.
JetBrains Mono	Labels/system	400 / 500	Use sparingly for scene numbers and metadata.
Tajawal	Arabic body/UI	400 / 500 / 700	Keep as Arabic default and safe display.
Lemonada	Arabic display	400 / 600 / 700	Accent-only; review before broad use.

Scale And Readability Findings

Area	Sizes Tested	Result
English display	88, 72, 56, 40, 32px	Cormorant works at large sizes. Sentence case is strongest. Gold text should be rare.
Arabic display	56, 48, 40, 32, 28px	Tajawal Bold is safer than Lemonada for legal seriousness. Lemonada is decorative risk.
English body	20/1.7, 18/1.7, 16/1.65, 14/1.55	DM Sans passes. 16px minimum, 18px preferred for reading.
Arabic body	20/1.8, 18/1.8, 16/1.75, 14/1.65	Tajawal passes with more generous line-height than English.
Labels	11, 12, 13px with 0.08-0.15em tracking	JetBrains Mono works best at 11-12px, sparse use only.

Bilingual Pairing Decision

Best primary approach: language-specific layouts. Arabic and English should not be forced into the same hero composition. Arabic-primary with English support is acceptable for signature brand moments. Do not mix Arabic and English fonts in the same line.

CTA And UI Findings

Context	Recommendation	Accessibility Note
Primary outline CTA	DM Sans 600 / Tajawal 700	Gold border, parchment text.
Filled gold CTA	DM Sans 600 / Tajawal 700	Near-black text only; no white on gold.
FAQ	DM Sans 16-18 / Tajawal 16-18	Arabic line-height 1.75-1.85.
Workshop card	Cormorant for English title; Tajawal 700 for Arabic title	Specimen block only, not final UI.
Form labels	DM Sans 14/500; Tajawal 15/500	Keep focus ring visible.

Mobile Wrapping

English hero headlines should cap around 42-46px on narrow mobile. Arabic hero headlines should use around 38-44px with 1.18-1.25 line-height, or smaller for long strings. CTA text fits at 16-17px in both languages. Arabic

line-height should not inherit tight English display metrics.

Measured WOFF2 Payload

Font	Weights Needed	Measured WOFF2	Loading Recommendation
Cormorant Garamond	Normal 600-700 Latin + Italic 400 Latin	59.9 KB	Self-host; preload normal display only; italic optional.
DM Sans	Latin 400/500/600; 300 optional	36.1 KB	Self-host variable Latin subset; preload if above fold.
JetBrains Mono	Latin 400/500	30.7 KB	Self-host; avoid preload unless labels are above fold.
Tajawal	Arabic 400/500/700	26.2 KB	Self-host; preload 400 and 700 on Arabic pages.
Lemonada	Arabic 400/600/700 variable	26.0 KB	Load only if accent use is approved.

Accessibility Checks

Area	Pass / Concern	Notes
English display readability	Pass	Large Cormorant works on dark; avoid body use.
Arabic display readability	Concern	Lemonada is readable but decorative; Tajawal Bold passes.
English body readability	Pass	DM Sans 16px minimum, 18px preferred.
Arabic body readability	Pass	Tajawal 16px minimum, 18px preferred; higher line-height.
CTA readability	Pass	Filled gold uses near-black text.
Labels readability	Pass with caution	JetBrains Mono can feel technical if overused.
Mobile wrapping	Pass with caution	Long headlines need localized wrapping.
Font payload	Concern	All tested subsets total about 178.9 KB; Lemonada conditional.

Typography Guardrail Table

Keep	Avoid
Cormorant for large English authority moments	Using Cormorant for all text
DM Sans for clarity and body reading	Making the site feel like SaaS
JetBrains Mono for precise labels only	Overusing mono as a tech aesthetic
Tajawal for Arabic body/UI readability	Treating Arabic as secondary
Lemonada only if it feels mature and legal	Decorative Arabic that feels playful
Parchment text on dark	White text on gold CTAs
Separate Arabic/English elements	Mixing English and Arabic fonts on one line
Generous Arabic line-height	Cramped Arabic text
Minimal font weights	Loading every available weight

Final Recommendation

PASS WITH CONDITIONS. The typography direction is viable for later creative planning. Conditions: Lemonada requires client/Arabic copywriter review; Tajawal 700 should be the safe Arabic display default; final font licensing and self-hosting terms must be confirmed; production subsets must be re-measured after final choices; native Arabic review is required before final UI design.
